OMS/ESG/OSH
5N11 STAFFORD
WASHINGTON DC 20505-0001

Occupational safety and health program annual report submitted in accordance with Title 29 CFR Part 1960, *Basic Program Elements for Federal Employee Occupational Safety and Health Programs and Related Matters*, and Executive Order 12196, *Occupational Safety and Health Programs for Federal Employees*.

Statistics

The number of injury and illness cases, case rates, and chargeback costs are classified. This agency has no significant trends or major causes or sources of fatalities and lost time disabilities which occurred last FY 2011.

Agency occupational lost time rates have remained relatively steady over the last few years, in spite of recent world events, and agency operations and activities. However, in fiscal year 2011 this agency did have a decrease of 6% for the lost time case rate. Major causes or sources of fatalities and lost time disabilities in our agency are known.

Occupational Safety and (OS&H) Health Initiatives

The goal of our occupational safety and health program is to identify and mitigate occupational safety and health hazards. Consequently, we strive to provide a safe and healthful workplace for our employees and locations both domestic and abroad.

This agency plans on continuing our proactive occupational safety and health programs. Based upon our programs, self evaluations and measured results, this agency currently meets the President's fiscal year performance criteria previously set for FED 2000 total case rates (TCRs) for target reductions in accordance with the President's Safety, Health, and Return-to-Employment (SHARE) initiative.

We continue to evaluate and assess our OS&H program in order to ensure effective implementation for domestic and field activities.

OS&H Support Activities

Conduct agency-wide comprehensive inspection activities, evaluate the effectiveness of occupational safety requirements in the work environment, assess compliance, develop changes and modifications to a broad range of highly technical and classified work processes and equipment operations.

Accomplishments and Goals

Continue to strive to reduce injury and illness rates in high hazard operations. Sustain maximum OS&H program support in this period of competing and diminishing resources
